

LOW CEMENT PRE-CAST SHAPES

PRODUCT DATA

MIGHTYFIBER SIL2-HCA-20

MightyFiber SIL2-HCA-20 is part of a family of composite products consisting of a blend of oxidation resistant stainless steel fibres combined with a fine grained castable matrix. This combination allows Pre-cast elements to be produced which exhibit extreme Thermal Shock, Impact and Erosion resistance combined with super high strengths. Manufacture does not use the established infiltration method; instead a mixing technique is employed which allows a coarser and much stronger matrix to be used than previously possible. This product can only be supplied in the form of pre-cast shapes.
